Overharvesting

Invasive Species

Pollution

Human Population

With fire season around the corner, the city of Cape Town is urging landowners to remove certain invasive species to reduce the threat of fires spreading.

Species which could increase the spread of wildfires:

- Silky hakea**
- Red eye wattle**

INVASIVE SPECIES ALERT

SA's most dangerous water weed - **the water hyacinth**

A threat to indigenous plant species - **the Long leafed wattle**

Mallard ducks pose a real threat to SA's yellow-billed duck because of interbreeding.

Visit www.invasives.org.za to find out if your property contains category 1A or B invasive species. If so then you will need to have them removed and treat the area with herbicides.
